ELECTRICAL SECTION (ALL MODELS)

- A. Disconnect all power sources before opening electrical boxes and working within.
- B. Read the nameplate and markings carefully and consult the wiring diagram before you start wiring.
- C. Wires and protective equipment should be sized according to the National Electrical Code requirements.
- D. Use only wires suitable for at least 75°C.
- E. Disconnect room thermostat connection to furnace and connect to C and W1 terminals of heater.
- F. Connect two (2) wires from BB control terminals of plenum heater to furnace room thermostat connection.
- G. Connect the fan relay supplied with the heater (terminals F F) to the existing fan controls in order to permit the functioning of the fan in the electric mode.
- H. **Anticipation** Set the room thermostat heat anticipator at 0.2. Perform start-up and required field tests. (Please see fig. 10) or schematic wiring.
- I. **Outdoor thermostat.** If required install an outdoor thermostat on an exterior north wall and connect to terminals S1 and S2 in the plenum heater to allow for automatic transfer in the dual energy mode.

FIG. 10
TYPICAL WIRING AFTER INSTALLATION OF ADD ON HEATER

Next Working Day Designed with 4 large control buttons with audible and tactile feedback and an electronic lock available to prevent tampering with the controls. It has a frost protection setting and can set comfort and setback temperatures. Please contact us. You may cancel your order prior to dispatch or within 14 days of delivery. Notification of cancellation must be in writing, you can do this here. You cannot cancel your order via telephone. This is in accordance with the Distance Selling Regulations 2000. All items must be returned undamaged, in their original packaging and in a resaleable condition. We ask that the goods are returned within 14 days of your return request. If you fail to return the goods, we reserve the right to charge for the cost of collection and you are legally obliged to make them freely available for collection. Returned goods may also incur a restocking fee depending on the item. Your refund will be done promptly and certainly within 30 days. Your refund will be done according to your method of payment. Powered by Zoey You have no obligation to purchase the product once you know the price. You can simply remove the item from your cart. This feature helps diagnose a problem occurring in the heater and prevents high surface temperatures that could lead to risks of burn injuries. When the safety monitoring identifies a fault, the heat is switched off and the heater will beep at different intervals depending on the problem. Users can then follow clear instructions in dealing with the fault from the manual provided with the heater. All heaters offer a 7day programme with 6 heating periods per day and are enhanced with one of the latest low energy consumption EC motors. This allows the heater to operate quietly, whilst still providing the best possible levels of comfort. Please upgrade your browser to improve your experience. PHPD discovers more about its latest solutions. <http://www.pkreality.sk/images/data/fb460v-repair-manual.xml>

Similarly, with many people enjoying busy lifestyles, controls must be easy to understand and operate. It is mains or battery powered and offers up to six temperature settings a day, seven days a week. It has three different operating modes and features a 15-minute Boost with temperature control to provide the maximum comfort quickly. The open window detection feature is fully automatic and, once enabled in the setup menu, it does not require further intervention to be activated. The CRXSL can also control multiple RX and SL heaters at the same time. Supplied with a security wall bracket and a table top stand, the CRXSL can be placed anywhere in a room. This feature has been designed to diagnose a problem occurring in the heater and will help prevent high surface temperatures that could lead to risks of burn injuries. Users can then follow clear instructions in dealing with the fault from the manual provided with the heater. All heaters offer a 7-day programme with 6 heating periods per day and are enhanced with a low energy consumption EC motor. All our couriers are still operating as normal. Brand Consort Claudgen Downloads Manual Manual Provides instant heat where space is at a premium and discreet yet effective heating is required. These slimline plinth heaters require a minimum kick space height of only 100mm thereby offering increased installation options. When both heater and wireless controller are positioned correctly in a room, the constant wireless communication enhances accuracy in temperature control making it more energy efficient to operate.

The new CRX1 wireless controller features a large easy-to-read backlit LCD display and offers up to six temperature settings a day, seven days a week. It has four different operating modes and features a 15-minute Boost with temperature control to provide the maximum comfort quickly. The CRX1 wireless controller works with all RX heaters and can operate different products at the same time, allowing total heating systems to be effectively controlled; for example, in an apartment, plinth heaters and panel heaters could use the same controller. This modern design controller is supplied with a security wall bracket and a table top stand which is perfect for placing it anywhere in a room. The water is always hot. My electricity bill is down. I would gladly recommend this system to anyone. I can't actually remember a time where I have had to boost the system. I quite like the visual

aspect of Apricus as well. I've had systems in the past that looked big and ugly. You must have JavaScript enabled in your browser to utilize the functionality of this website. In addition they are maintenance free. This powerful electric fan heater can provide a "heat throw" of 7m at maximum fan speed. The intelligent fan control optimises fan speed and heat output to quickly achieve and control a comfort temperature, whilst maintaining a very low noise level. The Consort CH06CSiRX commercial fan heater provides comfortable heating while working in garages, workshops and warehouses. A great solution for commercial applications. This clever fan heater can be wirelessly controlled by a CRXSL controller. The CRXSL controller is sold separately at check out. This is a Lot20 compliant product. The CRXSL controller is sold separately at check out. As a general rule we advise you to buy an Air Conditioner with a minimum 7,000BTUs as this is the minimum required to cool a small room 18m² on a hot day.

<http://www.bouwdata.net/evenement/boss-cs-3-owners-manual>

Medium rooms 24m² need around 10,000BTUs and larger rooms and office spaces 36m² require around 15000BTUs. Delivery is only free to UK Mainland, this includes England, Wales and parts of Scotland. International deliveries will incur a delivery charge. Please ring our sales team for assistance. Next Working Day refers to Monday to Friday and excludes weekends and Bank Holidays. You are responsible for returning the goods purchased in their original packaging. Find out more on our Returns Policy Page We use reliable couriers with a 99.9% success rate however once a consignment is within the courier network there is always a very small chance something could go wrong, however unforeseen. Active Air Control will not be liable for any costs incurred by any such delays waiting for goods. Active Air Control advises strongly against booking Tradesmen until after goods are safely received and checked for this exact reason. The customer reviews and brand answers you'll see above are submitted independently. As we don't review these answers, we can't take responsibility for anything they may say. The responses from Active Air Control Limited colleagues are accurate at the time of publishing. For the latest info, you should check the product page. This product comes with a minimum one year manufacturer's guarantee, unless otherwise stated in the specification above. Very good value for money. Awesome customer service guys. Please check your email for further instructions. Your 25 voucher code is on its way! Please check your

entries and try again. This stove has a compact design to allow it to be installed in the smallest of fireplaces whilst keeping the traditional charm of the wood burning version of the stove. The Consort 5 has a cosy size but still offers a toasty 3.7kW output that would easily be enough to heat up a small room.

heater. Usually, these are identified by the broad toggle switches that simultaneously control two singlepole breakers. However, sometimes 240V breakers are a slimmer, narrowbody breaker often called a tandem breaker. Set the grille and screws aside. Test at various points throughout the heater.

<https://trucraftsmanship.com/wp-content/plugins/formcraft/file-upload/server/content/files/162852002945ff---Burnham-boilers-manuals.pdf>

The two sets of wires are pigtailed twisted and covered with plastic wire nuts. If loose, reattach. It may be necessary to rip back the sheathing to expose more of the wire, then strip back the wire casing. For minor nicks, wrap with electrical tape. The coils must be spotless. Any debris left on the coils will smoke and possibly even catch fire. Be careful not to dislodge or damage the delicate vanes of the blower. The blower should spin freely. In this case, turn off the heater and flip the circuit breaker back on. At the heater, turn the heater on. AFCI breakers, in particular, can be so sensitive that they frequently cause nuisance tripping. Alternatively, you can remove the existing heater and install another heater that draws fewer watts. Inspect the points where the wires connect to the electrical heater. This will likely cause the heater to fail and maybe even cause a fire. Remove the existing heater and replace it with an appropriately sized heater. Understand the Potential Problems UV water purifier Which is better Here's everything you need to troubleshoot Find out why Here is what you should do Here is what you need to do Here is what you should do Here is what you need to do Not only does it heat a room but also provide with comfort and cosiness. These heaters are of many types such as wall mounted, portable and others. No matter what the type, the appliance may stop working for a number of reasons. If this happens, then it is important to first understand the cause and then find a suitable solution. Moreover there are certain problems with electric heaters that you can resolve on your own whereas others may need professional approach. The following are the causes and solutions for electric heater not working If yes, then check whether the power switch is working properly or not. This can be done by connecting another power device to the switch and checking whether it is working or not.

<http://www.abvent.com/emailing/files/800-amp-transfer-switch-manual.pdf>

If not, then there is an issue with the power switch and it needs to be repaired. If not, the following given points might prove useful. When heaters get too hot, then this feature shuts off the device for safety purposes. May be because of this feature your heater may not be working. Unplug the device and let it cool down for 10-15 minutes. Plug it back again and turn the switch on. It could either be stuck, gone loose or may have become faulty. If it is at an off position or a low temperature, then try turning it on a higher level. See if it starts working now. Because of this reason too the electric heater may not work or not provide enough heat. An electric cord can go faulty and may stop working which in turn affects the working of the heater. It must not be torn or broken from anywhere in between. This can be done by following the given steps But if you are unable to find the cause and hence the solution, you must contact a professional. You can get professional help for room heater or blower not working by contacting Mr Right. Here are causes and solutions Troubled with your noisy water radiator. Here are the solutions Find out here Nothing wrong with socket as another heater working perfectly in same socket now. Can the plug be replaced safely by an electrician People who are using room heater would find it helpful. Great work! They would find it helpful for sure. Thanks for sharing this with us! I reset the circuit breakers and still nothing. I checked the outlet and it's good. I don't know what else to do. It's never been on high heat, only a bit of warmth for the birds in the bird room. Now bupkis. It would not go off, and I had to close the electric switch in our main panel to force it off. Shpock is a marketplace and classifieds platform that brings millions of private buyers and sellers across the United Kingdom together. London, Brighton, Birmingham, Bristol, Manchester, Leicester and Liverpool are amongst the most active areas for second hand shopping. There are offices on the ground floor with mezzanine offices over. Bookmark the permalink. To find out more, including how to control cookies, see here. However, dimensions and other physical characteristics may differ. Consort will repair all defective equipment returned to it during the warranty period without charge, provided the equipment has been used under normal laboratory conditions and in accordance with the operating limitations and maintenance procedures in this instruction manual and when not having been subject to accident, alteration, misuse or abuse. A return authorisation must be obtained from Consort before returning any product for warranty repair on a freight prepaid basis. Consort is not liable for consequential damages arising out of the use or handling of its products.

In the event of this instrument being returned for servicing, the owner is requested to remove the power supply lead and NOT to send the following items unless they are suspect: Manual Cables, Accessories. If serious malfunctioning occurs, stop using the unit immediately and consult your local Consort dealer. Do not hold the adaptor by wet hand. Automatic temperature compensation and temperature measurements are possible by plugging a Pt1000 temperature probe into the C terminals. You can also use an electrode with builtin Pt1000. Its banana plugs should be inserted in the C terminals. Without Pt1000, the manual temperature compensation is automatically switched on. Never immerse a pH electrode and an oxygen electrode together in the same solution. A blinking decimal point warns you for unstable measurements. Wait to read the display. Stirring the solution during the measurements promotes the homogeneity and is obligatory. The instrument will refuse automatic calibration when the electrode is unstable. The display will immediately show the measured value according to the previous calibration. Should you want to recalibrate, press CAL. 2. The display shows three of the 9 buffers in memory 1.68, 4.00, 4.01, 6.87, 7.00, 9.18, 9.21, 10.01, 12.45. Select the proper buffers and press CAL. The unused buffer should be switched off. 3. Rinse the electrodes with distilled water and immerse them in the first buffer solution. The display will immediately show the measured value according to the previous calibration optional. Should you want to recalibrate, press CAL. 2. Immerse the electrodes in a standard solution of known potential. The display shows a list of stored values. 2. Select the desired address to read the stored values. 3. Press MODE to return to the normal measurements. Should you want to recalibrate, press CAL. 2. The display shows one of the 3 standards in memory 0.01, 0.1, 1 M KCl. Select the proper standard and press CAL.

Also select the temperature to which all future measurements will be referred to. 3. After rinsing the cell several times with the standard solution, immerse it in that standard. The solution temperature is not so critical but should lie between 0 C and 30 C. When no Pt1000 is used, do not forget to compensate manually first. Should you want to recalibrate, press CAL. Without Pt1000, adjust the manual temperature compensation and proceed by pressing MODE. Should you want to recalibrate, press CAL. 2. Immerse the Pt1000 in a standard solution of known temperature. Calibrate to the proper value and press CAL again or press MODE to reset the factory settings. 3. C860 6 A pH electrode is active and stable only after wetting. For this purpose it must be immersed for at least ten hours in a M KCl solution. During short interruptions e.g. storage the electrode should be immersed in a M KCl solution. In doing this it is always kept ready for use. When the interruption is longer than a month, refill the closing cap with M KCl and plug it on the electrode tip in order to protect the glass bulb. Before use, ensure that the reference part of the electrode is topped up with a M KCl solution. Avoid a low pressure inside the electrode. Therefore always remove the closure from the refilling aperture during the measurements as well as during the calibration. This allows the saltbridge solution to flow through the ceramic liquid junction and prevents contamination of the electrolyte. For the same reason, the inside level should always be higher than the outside level of the measuring solution. Close the refilling aperture again when storing the electrode. A polluted

electrode may be cleaned with a soft detergent or 0.1 M HCl. Greasy substances may be removed with acetone or alcohol never do this with plastic electrodes!.
